ABSTRACT

Results of the 1987 assessments of grades 4, 5, 7, 9, and 11 in South Carolina public schools are summarized. The Comprehensive Tests of Basic Skills, Form U, was administered to 222,956 South Carolina students in these grades. Achievement levels of grades 4, 5, and 7 were above the national median in all seven areas tested (reading, spelling, language, mathematics, reference skills, science, and social studies). The 1987 assessment represents the first time that students in these three grades scored above the national median in all areas. In grades 9 and 11, scores were above the national median in all areas, except reading, reference skills, and science. Performance has risen for all grades since 1983, reflecting great improvement in educational quality in South Carolina. Bar graphs show performance for each grade from 1983 to 1987. Six appendices describe the tested students according to the parameters included in the report. (SLD)

Introduction

For the fifth consecutive year, the Comprehensive Tests of Basic Skills, Form U, (CTBS/U) was used to measure achievement in the seven areas of Reading, Spelling, Language, Mathematics, Reference Skills, Science, and Social Studies. The results of the assessment of Grades 4, 5, 7, 9, and 11 in South Carolina public schools are summarized in this report.

All 91 South Carolina school districts participated in the 1987 Statewide Testing Program at all five grade levels. Tested as part of the 1987 Statewide Testing Program during the last two weeks of March, were 222,956 South Carolina 4th, 5th, 7th, 9th, and 11th graders. In the 4th grade, 44,946 students were tested; in the 5th grade, 42,831 students were tested; in the 7th grade, 46,123 students were tested; in 9th grade, 50,386 students were tested; and, in the 11th grade, 38,670 students were tested. Students in Grades 9 and 11 were tested on a statewide basis for the second time.

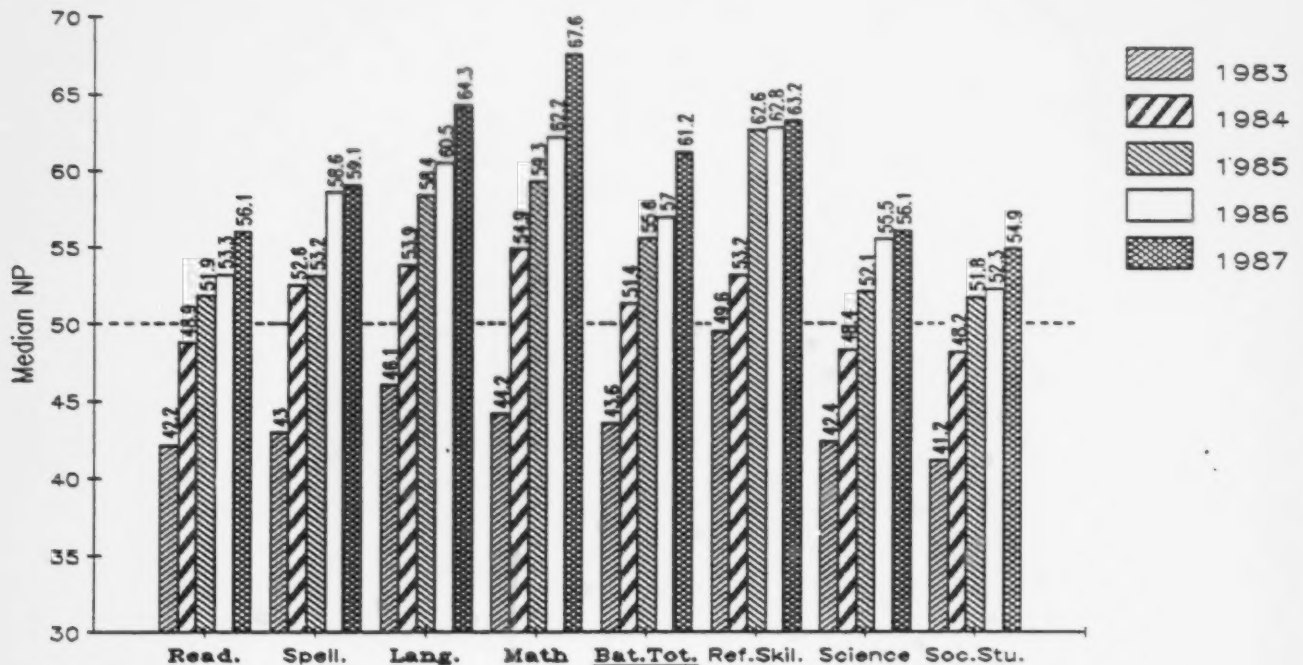

The achievement levels of the 4th, 5th, and 7th grades were above the national median in all seven areas tested in 1987. This is the first year that the achievement of 5th and 7th graders exceeded national norms in all areas. Students in the 9th and 11th grades scored above the national median in all areas except Reading, Reference Skills, and Science.

The performance of all five grades has risen since the first administration of the CTBS/U in 1983. A steady upward trend has been apparent for Grades 4 and 7 over the past four years; and the scores of 5th graders have similarly improved since they were first tested in 1985. Students in the 9th and 11th grades have also shown gains in every area over the past year. The CTBS/U scores continue to reflect great strides on the road to educational quality in South Carolina.

For a more specific description of the results of this CTBS/U assessment, the performance of each grade for 1983, 1984, 1985, 1986, and 1987 is shown in a bar graph followed by a brief discussion. All of the graphs depict the median (middle score) national percentile (NP) for South Carolina students as compared to those for the nation, which is by definition the 50th national percentile for all skill areas.

Appendices which describe the tested students according to varying parameters are included in this report. Appendices A and B are district tables which list the percentages of students above the 50th national percentile and median national percentiles and for all tested grades. Appendix C is comprised of summary tables which include several types of scores for all students, as well as various subpopulations. The two graphs in Appendix D allow comparisons across grades of the median percentile scores and the percentages of students above the national percentile for Reading, Language, Mathematics and Battery Total. Appendix E contains graphs which depict the progress across years for each grade as measured by the percentages of students above the 50th national percentile. Finally, Appendix F provides cautions which should be observed in the interpretation of test results.

NOTE: Battery Total consists of Reading, Language, and Math.

Figure 1 shows the performance of Grade 4 students across the seven skill areas. In 1987, South Carolina 4th graders scored above the national median in all areas with the highest percentile in the area of Mathematics (67.6). The 4th grade Battery Total median NP score for this year was 61.2.

The performance of the 4th grade has steadily increased in every skill area between 1983 and 1987. The largest increase between 1986 and 1987 was in Mathematics (5.4 percentile); but gains were evident in the other two Battery Total areas: Reading (2.8 percentiles) and Language (3.8 percentiles), as well as Reference Skills (0.4 percentiles), Science (0.6 percentiles), and Social Studies (2.6 percentiles).

NOTE: Battery Total consists of Reading, Language, and Math.

The performance of the 5th graders in all seven skill areas is shown in Figure 2. In 1987, for the first time these students scored above the national median in all of the seven skill areas. Their performance in Mathematics was substantially above the national median again this year (64.2). The 5th grade Battery Total median NP score was 54.4.

The 5th grade has also shown an increase in all areas since 1986 with a notable improvement in Reference Skills this year, an increase of 8.4 percentiles. All skills included in the Battery Total improved with Reading scores rising 2.7 percentiles, Mathematics, 3.1 percentiles, and Language, 4.1 percentiles. Percentile increases in Spelling (4.3), Science (0.5), and Social Studies (0.4) were also observed.

Figure 3 reveals that in 1987 South Carolina 7th graders scored above the national average in all skill areas for the first time in the five years of administering CTBS/U. Their highest level of performance this year was in Mathematics (62.6). The 1987 Battery Total median NP score for the 7th grade was 55.4.

The performance of this state's 7th graders has increased in all skill areas each year since 1983. Between 1986 and 1987, their largest gain was in the area of Reference Skills (8.3 percentiles). The gains in the areas of Mathematics (3.0 percentiles), Language (3.4 percentiles), and Reading (2.6 percentiles) contributed to the rise in Battery Total score this past year. Increases in the areas of Spelling, Science, and Social Studies were 4.7, 0.6, and 0.5 percentiles, respectively.

NOTE: Battery Total consists of Reading, Language, and Math.

The CTBS/U assessment of South Carolina 9th graders was reported for the second year. As shown in Figure 4, these students scored above the national average in six of seven skill areas in 1987. Their performance in Reading (46.5) remained below the national median percentile of 50. The 1987 Battery Total NP for the 9th Grade was 50.6.

The scores of 9th graders reflected improvement in all areas over the past year. The greatest gain was reported for Spelling (6.5 percentiles); but the increases shown in Reading (1.2 percentiles), Language (1.4 percentiles), and Mathematics (2.1 percentiles) resulted in a Battery Total score above the national median. Progress was also apparent for Reference Skills, Science, and Social Studies for which gains of 0.1, 0.3, and 0.3 percentiles were reported.

Grade 11

*The median national percentile in all areas tested is 50.

NOTE: Battery Total consists of Reading, Language, and Math.

The assessment of South Carolina 11th graders was also reported for the second time using the CTBS/U, and performance of these students is shown in Figure 5. Students in Grade 11 scored above the national median in four of the seven skill areas. The Battery Total NP for Grade 11 was 54.1 in 1987.

The performance of the state's 11th graders rose in all skill areas between 1986 and 1987. Their largest gains were in the areas of Social Studies (4.9 percentiles) and Reference Skills (4.4 percentiles). Increases were similarly reported in all Battery Total areas, Language (3.0 percentiles), Mathematics (2.3 percentiles), and Reading (2.2 percentiles). Improvement in Spelling (0.6 percentiles) and Science (1.7 percentiles) was also observed.

Concluding Comments

The 1987 assessment in South Carolina represents the first time that students in Grades 4, 5, and 7 scored above the national median in all areas. Students in Grade 9 scored above the national average in all areas except reading; and students in Grade 11 performed above the national average in all areas except Reading, Reference Skills, and Science. However, the scores of Grade 11 students were very close to the national median in Reference Skills and Science.

South Carolina students have continued to show gains in every area over the past five years. The impact of the EIA is particularly apparent for the lower three grades in which above average performance was reported on every skill measured on the CTBS/U.

^a THE COLUMNAR HEADING ENTITLED "% FREE LUNCH ELIGIBILITY" IS BASED ON THE NUMBER ELIGIBLE FOR FREE LUNCH DIVIDED BY THE AVERAGE DAILY MEMBERSHIP (GRADES K-12, 45-DAY ADM) AS REPORTED BY THE SCHOOL DISTRICTS TO THE OFFICE OF SCHOOL FOOD SERVICES, OCTOBER, 1986. SCHOOL MEALS MAY NOT BE MADE AVAILABLE TO ALL KINDERGARTEN STUDENTS IN ALL DISTRICTS. STUDENTS IN ALL GRADES MAY BE ELIGIBLE FOR FREE MEALS, BUT MAY CHOOSE NOT TO APPLY OR PARTICIPATE IN THE MEAL PROGRAM. THEREFORE, THE RATE OF ELIGIBLE STUDENTS SHOWN IN THIS TABLE MAY NOT REPRESENT TOTAL ELIGIBLE STUDENTS AND MAY BE SLIGHTLY DISTORTED.

APPENDIX F
Cautions in Interpretation of Test
Results

CAUTIONS IN INTERPRETATION OF TEST RESULTS

There are a number of cautions concerning the interpretation of norm-referenced test results. Norm-referenced testing is designed to allow educators to compare the performance of a student or a group of students to the performance of a national normative group. Since the test content must be universally applicable, the test questions measure global or national instructional targets rather than more specific local objectives. Therefore, the possibility is strong that the content covered on the test is taught locally at a different grade level other than the one tested. These possible content validity problems should be taken into account when interpreting test results.

A second caution relates to frequent misuse of standardized test data, namely, the inclination among users of the data to equate high test scores with educational quality. Practitioners must remember that test data constitute a single type of information that must be used in conjunction with other pieces of information to evaluate educational quality. For example, entry characteristics of students such as socioeconomic background and educational level of parents are strongly related to test performance. Therefore, comparisons of scores among schools and/or districts should not be made unless differences in the populations of students are considered as part of the comparison.

Third, differences between the norming sample and the South Carolina student populations should be taken into account. Key socioeconomic indicators, including adult literacy rate and average annual income, are among some of the factors that relate to test achievement. Achievement test data will of necessity be influenced by these factors.

A fourth caution concerns the grade equivalent score. The most common abuse of grade equivalents is to equate the score to grade level performance. If a 7th grade student obtains a grade equivalent score of 9.0 in the Spring on Level H

of the CTBS/U, this result can only mean that the student is substantially above average compared to the 7th graders in the normative group. A frequent misuse of the data would be to label the student as a 9th grade achiever although 9th grade content was not measured. Another problem with the grade equivalent score is that the value of the score fluctuates considerably as a function of the raw score. An increase in one raw score point may result in an increase of as little as 0.1 grade equivalent or as much as 1.6 grade equivalents, depending on the subtest under consideration. This relationship between the raw score and the grade equivalent should be considered in the interpretation of these scores. Therefore, the Department recommends using national percentiles rather than grade equivalents. When comparing gains at different points in the distribution, the Normal Curve Equivalent (NCE) provides the fairest, least distorted information. The NCE provides an equal interval scale and is based on national percentiles.

A fifth caution relates to comparing the 1983, 1984, 1985, 1986, and 1987 test results with those from previous years. The results of the 1983, 1984, 1985, 1986, and 1987 Statewide Testing Programs are not directly comparable with the results from previous years because the newer test, the CTBS/U has a different norming group and is different in test content. Although conversion tables are available to convert the earlier CTBS/S results to CTBS/U results, these conversions are approximations only. Therefore, if scores are converted for purposes of comparisons across years, these results should be viewed as estimations of student performance; otherwise, incorrect conclusions could be drawn about the change in student achievement over the years.
